6+ Years Full-stack SWE | 1 Year TPM

Summary

Full-stack software engineer with **6+ years** shipping production applications across fin-tech and e-commerce. Experienced shaping products, modernizing codebases, leading complex refactors, and owning features end-to-end on high-traffic platforms. Side-quested for **1 year as a technical program manager** in the company's founding role translating between C-suite, compliance, product, engineering, and vendors; owning the critical path and empowering cross-functional distributed teams to ship fast, at scale, and on time.

Experience

Freelance / Career Break

Self Employed

Calgary, AB

Apr 2025 – Apr 2026

- One-off technical projects, combination of paid and unpaid work, plenty of volunteering and personal life milestones.

Lead Technical Program Manager

Hypotenuse Labs

Toronto, ON

Apr 2024 – Apr 2025

- Owned and locked-down end-to-end delivery, reducing leadership escalations to 0, from scoping to launch, in a founding role for a **\$10M+** portfolio across fin-tech and e-commerce; building company-wide delivery playbooks & standards

Software Engineer

Hypotenuse Labs

Toronto, ON

Jun 2021 – Apr 2024

- Processed **1M+ records/day** for The Archivist by architecting high-throughput data ingestion pipelines utilizing **Python, ScrapingBee, AWS Lambda, SQS, and PostgreSQL**
- Trimmed **10-15K lines of application code**, resolved UX and performance-degrading bugs on *Ambient*, a **\$4B+** trading platform, by leading a multi-month **React** refactor to standardize component use and migrate app state management to **React Context**
- Overhauled release-engineering practices on *Ambient* to sustain **99% uptime** and resolve deployment bottlenecks, mentoring developers to implement CI/CD, branch protection, and automated deployment tests
- Delivered *The Archivist's* resale analytics dashboard, enabling real-time market insights by designing interactive visualizations (**Recharts**) backed by custom APIs and data stores (**Flask, Redis, Algolia**)
- Delivered custom gamification mechanisms for a DEX aggregator reward platform by engineering tiered-multiplier campaign logic atop a **Uniswap v3 React** fork, successfully leading client demos and onboarding new engineers
- Increased team velocity by roughly **66%** (empowering a **3-person team** to exceed a prior **5-person team's** output) and cleared a months-long PR backlog by restructuring sprint cadences and PR acceptance criteria as the lead customer-facing engineer

Freelance Software Engineer

Hypotenuse Labs

Toronto, ON

Dec 2020 – Jun 2021

- Co-architected the **React** marketplace FE for *The Archivist*, an LVMH award-finalist/Vogue-featured resale platform

Software Engineering Intern

BlackRock (FutureAdvisor)

San Francisco, CA

Jan 2017 – Dec 2017

- Migrated authentication and dashboard components from native JS/jQuery to **React.js**; built a shared UI component library used across a dozen banking institutions in **React Storybook**

Additional Engineering Co-ops

Solink, Medlantis, Royal Victoria Hospital

N. America

2014 – 2016

- *Solink*: Replaced an in-person client deployment process with a remote, version-controlled service (**Puppet**); shipped **Python** improvements to an image-processing and video-analytics platform
- *Medlantis*: Built a personalized video-lessons recommendation engine based on k-means clustering in **Python**
- *Royal Victoria Hospital*: Built an iOS-native hospital inventory data-visualization mobile app (tested with **Quick/XCTest, 90% coverage**), backed by a **SQL Server** and **ASP.NET API**

Education

University of Waterloo

B.S. Software Engineering (Year 1 at University of Ottawa, 2013-2014)

Waterloo, ON

2014 - 2018

Skills

Frontend: React, TypeScript, Vite, Swift, Tailwind CSS, Styled Components, Storybook, Jest

Backend: Node.js, TypeScript, Python, PHP, Ruby, PostgreSQL, Redis, GraphQL

Tooling: Claude, GitHub, Docker, DigitalOcean, AWS, GCP, Jira, Linear
